

STUDENT INSTRUCTIONS: BAT HEADS – THE POLLINATORS!

Student Instructions

With a partner, select one bat species from the list of pollinators. Fill in the planning part of the Student Response page.

Next, use the materials provided to create a model of the head, eyes, ears, face, nose, mouth, and tongue of the selected bat. Once completed dust or dip the bat face into the simulate pollen. With your bat head model, pollinate the flower provided by your teacher. Share your bat head with other teams and answer all questions and prompts on the Student Response page provided.
